

NEUROSCIENCE AND BEHAVIOR (M.S.)

Description

A new Neuroscience and Behavior (M.S.) has been approved for Academic Catalog year 2025/2026.

The M.S. Neuroscience and Behavior degree is only available as an accelerated B.S./M.S. program.

The program in neuroscience and behavior aims to:

1. Improve opportunities for excellent undergraduates to prepare for competitive Ph.D. programs or add an additional credential before entering a competitive job market; and
2. Allow students interested in neuroscience and behavior to advance and further specialize their biological sciences education in only one additional year at UNH.

The NSB Accelerated BS-MS offers interdisciplinary graduate training for students whose research interests include molecular and cellular neuroscience, evolutionary and developmental neurobiology, and cognitive, behavioral and computational neuroscience.

Course requirements and more information will be included in the 2025/2026 Academic Catalog, published in March 2025.
