ELECTRICAL AND COMPUTER ENGINEERING (ECE)

Degrees Offered: Ph.D., M.Eng., M.S., Certificate

This program is offered in Durham.

The Department of Electrical and Computer Engineering offers a doctor of philosophy (Ph.D.) degree, a master of science degree (M.S.) and a master of engineering degree (M.Eng.). The department also offers graduate certificates in Ubiquitous Computing and Wireless Communication Systems.

Opportunities

Advanced degrees in electrical and computer engineering open the door to a wider variety of job opportunities, particularly with regard to consulting, research and development, and positions in academia. Within the department, opportunities for formal study, research, and individual or team projects are available in the following areas: biomedical engineering; communication systems; digital signal processing; computer engineering, computer networks, digital systems, and logical synthesis; robotics and neural networks; image processing and pattern analysis; control systems; electromagnetics; pervasive computing; human-computer interaction; ocean engineering; cyber-physical security and systems; flexible and wearable electronics; bioelectronic sensors; instrumentation; Internet-of-Things; machine learning; and artificial intelligence.

Admission Requirements

An applicant should have completed a baccalaureate degree in electrical or computer engineering or have comparable training, which includes courses and laboratory experiences in mathematics and physical science as well as in topics such as network theory, digital systems, fields and waves, electronics, and electrical circuits. Students with a baccalaureate degree from a non-U.S. university must submit current (within five years) general scores from the Graduate Record Examination (GRE) and Test of English as a Foreign Language Exam (TOEFL).

Courses

Electrical and Computer Engineering (ECE)

ECE 814 - Introduction to Digital Signal Processing
Credits: 4
Introduction to digital signal processing theory and practice, including coverage of discrete time signals and systems, frequency domain transforms and practical spectral analysis, digital filter terminology and design, and sampling and reconstruction of continuous time signals. Laboratory component providing an introduction to DSP design tools and algorithm implementation. Lab.
Grade Mode: Letter Grading

ECE 815 - Introduction to VLSI
Credits: 4
Principles of VLSI (Very Large Scale Integration) systems at the physical level. CMOS circuit and logic design, CAD tools, CMOS system case studies. Students exercise the whole development cycle of a VLSI chip: design and layout with the up-to-date commercial EDA tools. An IA (continuous grading) grade is given at the end of semester I.
Grade Mode: Letter Grading

ECE 817 - Introduction to Digital Image Processing
Credits: 4
Digital image representation; elements of digital processing systems; multidimensional sampling and quantization; image perception by humans, image transformations including the Fourier, the Walsh, and the Hough Transforms; image enhancement techniques including image smoothing, sharpening, histogram equalization, and pseudo color processing; image restoration fundamentals; image compression techniques, image segmentation and use of descriptors for image representation and classification. Lab.
Grade Mode: Letter Grading

ECE 824 - Ubiquitous Computing Fundamentals
Credits: 4
Ubiquitous computing, or ubicomp, explores embedded, interconnected computing devices that are part of everyday objects and activities. This course takes an interdisciplinary look at the foundations of ubiquitous computing. Topics include software and hardware for ubicomp, human-computer interaction in ubicomp, and issues related to privacy and security in ubicomp. Students undertake a research project inspired by the material.
Grade Mode: Letter Grading

ECE 857 - Fundamentals of Communication Systems
Credits: 4
Spectra of deterministic and random signals, baseband and bandpass digital and analog signaling techniques, transmitter and receiver architectures, performing analysis of digital and analog signaling in additive noise channels, carrier and symbol timing synchronization methods. Lab.
Grade Mode: Letter Grading

Programs

- Electrical and Computer Engineering (Ph.D.)
- Electrical and Computer Engineering (M.Eng.)
- Electrical and Computer Engineering (M.S.)
ECE 872 - Control Systems
Credits: 4
Development of advanced control system design concepts such as Nyquist analysis, lead-lag compensation; state feedback; parameter sensitivity; controllability; observability; introduction to non-linear and modern control. Includes interactive computer-aided design and real-time digital control. (Also offered as ME 872.) Lab.
Equivalent(s): ME 872
Grade Mode: Letter Grading

ECE 875 - Applications of Integrated Circuits
Credits: 4
Design and construction of linear and nonlinear electronic circuits using existing integrated circuits. Limitations and use of operational amplifiers. Laboratory course in practical applications of non-digital integrated circuit devices. Lab.
Grade Mode: Letter Grading

ECE 884 - Biomedical Instrumentation
Credits: 4
Principles of physiological and biological instrumentation design including transducers, signal conditioning, recording equipment, and patient safety. Laboratory includes the design and use of instrumentation for monitoring of electrocardiogram, electromyogram, electroencephalogram, pulse, and temperature. Current research topics, such as biotelemetry, ultrasonic diagnosis, and computer applications. Lab.
Grade Mode: Letter Grading

ECE 886 - Special Topics in Electrical or Computer Engineering
Credits: 1-4
New or specialized courses and/or independent study. Some sections may use credit/fail grading.
Grade Mode: Letter Grading

ECE 899 - Master's Thesis
Credits: 1-6
May be repeated up to a maximum of 6 credits. Cr/F.
Repeat Rule: May be repeated for a maximum of 6 credits.
Grade Mode: Graduate Credit/Fail grading

ECE 900A - Research and Development from Concept to Communication I
Credits: 2
The course will introduce students to the general tools of scientific research and technical development. The course will also introduce students to tools and practices for reading, writing and reviewing documents that describe completed or proposed scientific research and technical development, as well as tools and practices for giving oral presentations about such documents to different types of audiences. Part one of a two course sequence.
Repeat Rule: May be repeated for a maximum of 4 credits.
Equivalent(s): ECE 900
Grade Mode: Letter Grading

ECE 900B - Research and Development from Concept to Communication II
Credits: 2
The course will introduce students to the general tools of scientific research and technical development. The course will also introduce students to tools and practices for reading, writing and reviewing documents that describe completed or proposed scientific research and technical development, as well as tools and practices for giving oral presentations about such documents to different types of audiences. Part two of a two course sequence.
Repeat Rule: May be repeated for a maximum of 4 credits.
Equivalent(s): ECE 900
Grade Mode: Letter Grading

ECE 901 - Electromagnetic Wave Theory I
Credits: 3
Maxwell's equations; plane wave propagation; reflection and refraction; guided wave propagation; waveguides; simple resonators; elements of microwave circuits, linear and aperture antennas, arrays of dipoles; receiving antennas.
Grade Mode: Letter Grading

ECE #903 - Antennas
Credits: 3
This course covers the fundamentals of antenna theory, and how to use and understand a contemporary computer modeling tool to analyze and design antennas or other types of microwave devices. Participants in the class are expected to complete a radiation-related project, whether it be a modeling project or a project involving the construction and analysis of an actual antenna (team efforts are encouraged as well).
Grade Mode: Letter Grading

ECE 915 - Advanced Active Circuits
Credits: 3
Investigation of devices and techniques used in advanced circuit design using discrete solid-state devices and integrated circuits. Oscillators, phase-lock systems, low noise techniques, etc.
Grade Mode: Letter Grading

ECE 920 - Wireless Communication Systems
Credits: 3
Principles of wireless communication systems including analysis of radio wave propagation and modeling, large scale and small scale signal fading, cellular communication architectures, multi-access systems, advanced modulation techniques, signal diversity systems, multiple antenna communications, cognitive radio, and software defined radio.
Grade Mode: Letter Grading

ECE 924 - Ubiquitous Computing
Credits: 3
Ubiquitous computing, or ubicomp, explores embedded, interconnected computing devices that are part of everyday objects and activities. This course takes an interdisciplinary look at the ubiquitous computing through the review of recent research literature. Topics include the visions of ubicomp and some of its applications, software and hardware for ubicomp, human-computer interaction, context awareness, privacy, and security. Students undertake a ubicomp research project inspired by the literature review.
Grade Mode: Letter Grading
ECE #939 - Statistical Theory of Communications  
Credits: 3  
Introduction to probability theory and random waveforms leading to a discussion of optimum receiver principles. Topics include random variables, random processes, correlation, power spectral density, sampling theory, and optimum decision rules.  
Grade Mode: Letter Grading

ECE 941 - Digital Signal Processing  
Credits: 3  
Discrete-time stochastic signals, signal modeling, parameter estimation, optimal filtering and decision making, with application to adaptive filters, echo cancellation, channel equalization and parametric spectral estimation. Requires prior coursework in discrete-time LTI systems, analysis and design of recursive and non-recursive linear digital filters, and Fourier based spectral estimation.  
Grade Mode: Letter Grading

ECE #944 - Nonlinear Control Systems  
Credits: 4  
Analysis and design of nonlinear control systems from the classical and modern viewpoints. Liapunov's stability theory, phase space methods, linearization techniques, simulation, frequency response methods, generalized describing functions, transient analysis utilizing functional analysis, and decoupling of multivariable systems. (Also offered as ME 944.)  
Equivalent(s): ME 944  
Grade Mode: Letter Grading

ECE 951 - Advanced Control Systems I  
Credits: 3  
State-space representation of multivariable systems, analysis using state transition matrix. Controllability and observability, pole placement using state and output feedback, Luenberger observers. Introduction to computer-controlled systems (sampling, discrete state representation, hybrid systems), nonlinear analysis (Liapunov, Popov, describing function). (Also offered as ME 951.)  
Equivalent(s): ME 951  
Grade Mode: Letter Grading

ECE 952 - Advanced Control Systems II  
Credits: 3  
Special topics in control theory: continuous and discrete systems; optimal control systems, including calculus of variations, maximum principle, dynamic programming, Weiner and Kalman filtering techniques, stochastic systems, and adaptive control systems. (Also offered as ME 952.)  
Equivalent(s): ME 952  
Grade Mode: Letter Grading

ECE 960 - Computer Architecture  
Credits: 3  
Advanced topics in computer organization. Parallel and pipeline processing, associative and stack computers, microprogramming, virtual memory, current topics.  
Grade Mode: Letter Grading

ECE #965 - Introduction to Pattern Recognition  
Credits: 3  
Machine classification of data, feature space representation, multispectral feature extraction, Bayes decision theory, linear discrimination functions, parameter estimation, supervised and unsupervised learning, clustering, scene analysis, associative memory techniques, and syntactic methods of recognition.  
Grade Mode: Letter Grading

ECE 966 - Robust Integrated Circuit Design and Verification  
Credits: 3  
This course covers the typical hardware failure causes, error control coding theories and their application in integrated circuit designs, fault tolerance techniques, hardware Trojan detection methods, and the principles of secure chip design. Prereq: Digital Circuits, Computer Organization.  
Grade Mode: Letter Grading

ECE 992 - Advanced Topics in Electrical Engineering  
Credits: 1-4  
Example of a recent topic: analog VLSI design. May be repeated.  
Grade Mode: Letter Grading

ECE 993 - Advanced Topics in Computer Engineering  
Credits: 1-4  
Example of recent topic: wireless communication networks. May be repeated.  
Grade Mode: Letter Grading

ECE 994 - Advanced Topics in Systems Engineering  
Credits: 1-4  
Examples of recent topics: neural networks, advanced digital telecommunications. May be repeated.  
Grade Mode: Letter Grading

ECE 998 - Independent Study  
Credits: 1-3  
Independent theoretical and/or experimental investigation of an electrical engineering problem under the guidance of a faculty member.  
Grade Mode: Letter Grading

ECE 999 - Doctoral Research  
Credits: 0  
Cr/F.  
Grade Mode: Graduate Credit/Fail grading
