

MATERIALS SCIENCE (M.S.)

<https://ceps.unh.edu/materials-science/program/ms/materials-science>

Description

Beginning in the 2023-2024 academic year, the Master of Science in Materials Science will no longer be accepting new students. Current students will continue to have access to the same high-quality education and resources until they graduate.

We offer degrees to qualified students interested in interdisciplinary research with an emphasis on the synthesis, characterization and utilization of nanoscale materials. All MSP students learn about the interplay of structure, processing, characterization, and properties of materials with useful applications. Our seventeen faculty members are active collaborators with research and development groups located around the world, and are experienced in managing research projects with practical results. Graduates of our program work in research, engineering and process development positions in a variety of fields.

Requirements

Degree Requirements

The Master's Thesis Option requires a total of **30 credits**, which include 24 course credits and 6 thesis credits (MS 899 Master's Thesis). At least 6 credits must be at the 900 level.

The Master's Project Option also requires a total of **30 credits**, which includes 27 course credits and 3 master's project credits. The project may be theoretically or experimentally based but will be significantly less intensive than a thesis. The project will be defined and evaluated by the student's advisor. At least 6 credits of coursework must be at the 900 level. The remaining course requirements are the same as that of the Master's Thesis Option.

Code	Title	Credits
MS 960	Thermodynamics and Kinetics of Materials I	3
MS #961	Thermodynamics and Kinetics of Materials II	3
Select one course each satisfying the following areas:		9-12
Synthesis and processing		
Characterization		
Structure-property relationships		
MS 900	Seminar (two semesters)	2
Select one of the following options:		
Thesis Option:		
MS 899	Master's Thesis	
Select one additional elective		
Project Option:		
Master's Project		
Select two additional electives		

Students who have done graduate work at other schools that included courses similar to those in the Materials Science Program may petition for waivers of UNH degree requirements. Other courses that may count as electives in the Materials Science Program are taught by faculty in chemistry, mechanical engineering, physics, and other departments. For a complete list of these courses, please see the Graduate Student Handbook on the materials science website.

Student Learning Outcomes

- Students will understand the nature of the atomic-level structures found in metals, ceramics, polymers and semiconductors.
- Students will learn the principles of diffusion and be competent in solving non-steady state diffusion problems.
- Students will master the concepts of phase transformations and have an in-depth understanding the principles of nucleation and growth and continuous phase transitions.
- Students will be competent at analyzing and deriving phase diagrams.
- Students will obtain in-depth knowledge in the areas of materials characterization and materials processing.
- Students will develop specialized knowledge in structure-property relationships in materials in either metallic materials, polymers, composites or electronic materials.
- Students will be well prepared for further studies in Materials Science or careers in industry or government laboratories.
- Students will be able to present new scientific research findings effectively in both written and oral form.
