MOLECULAR AND CELLULAR BIOTECHNOLOGY (M.S.)

Description

The Department of Molecular, Cellular, and Biomedical Sciences (MCBS) in the College of Life Sciences and Agriculture (COLSA) offers the professional M.S. in Molecular and Cellular Biotechnology (MCBT). This non-thesis degree program addresses the growing workforce and educational needs of the bioscience industries (including biotechnology, pharmaceutical, biomanufacturing, and medical device companies). The M.S. in MCBT provides continuing and accessible graduate-level education for individuals from broad backgrounds currently in the workforce, as well as for UNH undergraduate students seeking to enroll in an accelerated Master’s program, to gain specialized knowledge and skills prior to entering the workforce.

Distinctive Features of the Program

The program is founded on the existing academic rigor of the thesis-based graduate programs offered in MCBS and on the substantial innovative experiential learning opportunities enabled by existing biotechnology-relevant Centers: the University Instrumentation Center (UIC), the Center of Integrated Biomedical and Bioengineering Research (CIBBR), the NH Center for Multiscale Modeling and Manufacturing of Biomaterials (NH BioMade), and the Biomanufacturing Innovation Center (BIC). These resources will enable offering instrumentation training workshops in the following areas: genetic engineering of cells; recombinant protein production and purification; biological mass spectroscopy; nuclear magnetic resonance (NMR) spectroscopy; cell imaging and phenotyping; visualization of macromolecules.

Why get a professional Master’s of Science in Molecular and Cellular Biotechnology?

Our professional M.S. in biotechnology equips you with the knowledge, skills, abilities, and industry contacts required to take your chosen career in the biotechnology, pharmaceutical, or biomanufacturing industries to the next level. Unlike a thesis-based M.S. program, students in the MCBT Program take core and elective courses in biochemistry, molecular and cellular biology of immediate relevance to working professionals. Our mission is to efficiently provide our students the specialized knowledge and skills needed to successfully enter or advance their careers in a range of bioscience industries. This M.S. program concludes with a training experience in a research lab or industrial setting that will help launch you onto the next stage of your career journey in the biotechnology and associated industries.

Why choose UNH’s professional M.S. in MCBT?

As a Carnegie research-intensive (R1) institution, UNH offers outstanding opportunities to engage with world-class researchers, develop your analytical skills with state-of-the-art instrumentation, and be centrally located in the northeast biotech corridor that ranges from Boston to Portland. Whether you complete the M.S. in MCBT on a part-time or full-time schedule, you’ll graduate with the skills, knowledge, and connections to propel your career forward in the rapidly growing fields of biotechnology, pharmaceutical science, or biomanufacturing.

Admission Requirements

A distinguishing feature of the M.S. in MCBT curriculum is its flexibility to accommodate students of diverse backgrounds, and to provide a customized curriculum to meet the career goals that attracted them to this program. For admission, program applicants will be expected to meet the following prerequisites:

• GPA > 3.0 in prior academic programs, and/or excellent relevant work experience.
• Demonstration of English proficiency for non-native, English-speaking applicants (i.e., TOEFL score).
• Three letters of recommendation
• Personal statement specifying the applicant’s professional development and career plan.
• Required prerequisite courses: introductory biology (two semesters), genetics, organic chemistry.
• Strongly recommended prerequisite courses: microbiology, cell biology, math/statistics, biochemistry.

Please note that no departmental financial aid (i.e., teaching assistantships or research assistantships) is available to students admitted into this program. Information regarding tuition and fees is located here. Information about other types of financial aid is located here.

Accelerated Master’s Admission Requirements for UNH Seniors

Accelerated master’s admission is designed for highly motivated and qualified UNH students seeking additional training to further their career goals as a researcher in the life sciences. This program is an optimal way for qualified undergraduate students to begin earning graduate credits during their senior year. Students in most programs are able to take up to 12 credits that will count for both undergraduate and graduate credit, allowing them to maximize their time on campus and the return on their educational investment as they seek to increase their marketability after graduation.

Admission to the Accelerated Master’s is highly competitive. Students wishing to pursue this option must have a grade point average greater than 3.2 at the time of application. A faculty advisor must be identified during the junior year and the approval of the advisor must be obtained. Prior to the first semester of the senior year, the student must formally apply to the Graduate School and receive admission to the Accelerated Master’s MCBT Graduate Program.

Requirements

Completion of the M.S in MCBT requires at least 30 graduate credits in approved courses, including Core Curriculum courses, Elective courses, Workshops, and the custom-designed Capstone experience.

Required courses

Students are required to complete the Core Curriculum courses (chosen based on market analysis and additional industry input) to establish graduate-level skill competencies in the areas of protein biochemistry, molecular biology, and cell biology. Core requirements may be waived in those instances where the Admissions Committee ascertains that the
The required core curriculum courses consist of Cell Culture (lecture/lab), Protein Biochemistry (lecture/lab), and Molecular Biology (lecture/lab). Typically, students will complete the core curriculum courses prior to enrolling in the more advanced offerings.

**Elective courses**

In addition to the Core requirements, each student will develop a curriculum plan with the Admissions Committee and their Faculty Advisor that includes elective courses and workshops. Students will be encouraged to select elective courses and a capstone experience that encourage specialization (e.g., protein biochemistry, genetic engineering, cell imaging and phenotyping). Each curriculum plan will be customized to meet the career goals of the student. In addition to approved elective courses, other courses may be incorporated into the curriculum plan to provide breadth of training. These courses offered by other academic programs include: bioengineering, biomanufacturing, entrepreneurship and business management, and bioregulatory science (including administrative law, intellectual property, and licensing).

**Workshops:**

Workshops will be offered during the summer, J-term, and—in selected cases—during the academic year. For five prioritized areas, these workshops build from strong in-place MCBT faculty and staff expertise (and infrastructure) that are directly relevant to the biotechnology and pharmaceutical industry: (1) Cell Imaging and Phenotyping; (2) Cellular Engineering and Analysis of Recombinant Proteins; (3) Mass Spectrometry (4) Nuclear Magnetic Resonance (NMR) Spectroscopy; and (5) Macromolecular Visualization. These workshops will also feature invited participation from regional expert biotech and biopharma colleagues as well as technical specialists from instrument manufacturers, and will typically be developed as one-credit, five-day laboratory immersion experiences on the UNH campus.

**Capstone experience (including co-op and internship experiences)**

In consultation with the Faculty Advisor and with the approval of the Graduate Program Coordinator, students will design a Capstone experience (up to 10 cr.) that is consistent with their career development plans. The Capstone will typically consist of one of the following: (a) a research project in a UNH faculty member's research laboratory (usually the Faculty Advisor); (b) an internship/co-op experience in an industry setting (including the student's current workplace if applicable); or (c) an intentionally designed set of applied training workshops, as described above. The preferred scenario for the internship is a partnership between the student's off-site internship supervisor and the UNH Faculty Advisor in which the experiential learning experience has some components performed in the workplace and others on-campus.

**Student Learning Outcomes**

All MCBS graduates will be able to:

- Critically apply theories, methodologies, and knowledge to address fundamental questions in their primary area of study.
- Pursue research of significance in the discipline (or an interdisciplinary or creative project). Students plan and conduct this research (or implement their project) under the guidance of an advisor, while developing intellectual independence that typifies true scholarship.
- Demonstrate skills in oral and written communication sufficient to present and publish work in their field, and to prepare grant proposals.
- Follow the principles of ethics in their field, and in academia.
- Demonstrate, through service, the value of their discipline to the academy and community at large.
- Demonstrate a mastery of skills and knowledge at a level required for college and university undergraduate teaching in their discipline and assessment of student learning.
- Interact productively with individuals from diverse backgrounds in the roles of team members, leaders and mentors with integrity and professionalism.

Graduates of the Molecular and Cellular Biotechnology M.S. degree program will be able to:

- Demonstrate hands-on, broad based technical skills in biotechnology methodology.
- Demonstrate the ability to critically review current scientific literature in biotechnology.
- Demonstrate critical thinking skills to solve problems in biotechnology.
- Demonstrate comprehensive knowledge of biotechnology concepts.
• Demonstrate professional and scientific communication skills in biotechnology settings.
