

BIOENGINEERING MAJOR (B.S.)

<https://ceps.unh.edu/chemical-engineering/bioengineering-bs>

Description

Bioengineering, as defined by the NIH, is "the application of life sciences, mathematics, and engineering principles to define and solve problems in biology, medicine, health care, and other fields."

The bioengineering program will train graduates in biology and physiology as well as engineering. The program will provide graduates with capabilities in advanced mathematics (including differential equations and statics), science, and engineering. Graduates will be conversant with solving problems at the interface of biology and engineering that may arise in the fields of biotechnology and pharmaceuticals, as well as medicine and biofuels. By graduation, students will have experience measuring and interpreting data from living systems and addressing the interactions between living and non-living materials.

Students are required to obtain a minimum 2.0 grade-point average in CHE 501 Introduction to Chemical Engineering I/CHE 502 Introduction to Chemical Engineering II and in overall standing at the end of the sophomore year in order to continue in the major. Study abroad (Exchange) students are required to have a cumulative GPA of 3.0 or better in math, physics, chemistry, and other required courses at the end of the semester prior to their exchange semester.

For more information on the bioengineering program, please contact Xiaowei Teng, professor and chair, XW.Teng@unh.edu .

⁵ CHE 502 Introduction to Chemical Engineering II satisfies the Discovery Inquiry category.

The Discovery ETS category requirement is met upon receiving a passing grade in CHE 400 Chemical Engineering Lectures; CHE 761 Biochemical Engineering; CHE 762 Biomedical Engineering; BENG 763 Bioengineering Design I; BENG 764 Bioengineering Design II. Students who do not complete these courses must take a Discovery ETS course to fulfill the requirement.

34 credits engineering, 16 credits math, 14 credits chemistry, 16 credits life science

Five electives: 15 to 16 credits engineering; 4 credits science, math, or engineering

Student Learning Outcomes

- The ability to apply knowledge of mathematics, physical and life science and engineering.
- The ability to design and safely conduct experiments on living cells and nonliving materials.
- The ability to analyze and interpret data. The ability to identify, formulate and solve bioengineering problems.
- The ability to design a process or device that meets desired specifications with consideration of environmental, safety, economic and ethical criteria.
- An appreciation of contemporary issues relevant to bioengineering.
- Completed the Discovery program and obtained a broad education useful to understand the impact of engineering solutions in a global and societal context.
- The ability to use computers effectively for engineering practice.

¹ MATH 425 Calculus I satisfies the Discovery Foundation Quantitative Reasoning category.

² CHEM 405 Chemical Principles for Engineers satisfies the Discovery Physical Science (with lab) category.

³ ENGL 401 First-Year Writing satisfies the Discovery Foundation Writing Skills category.

⁴ BIOL 411 Introductory Biology: Molecular and Cellular satisfies the Discovery Biological Science (with lab) category.
